

TECHNICAL DESCRIPTION

SET-1240

8 channel 4/6-wire xVDT Emulator

This document is a technical description of the SET-1240 xVDT Emulator card.

 **Note** Before you begin, complete the software and hardware installation procedures applicable to your application.

 **Note** The guidelines in this document are specific to the SET-1240. The other components in the system might not meet the same safety ratings. Refer to the documentation of each component in the system to determine the safety and EMC ratings for the entire system.

Safety Guidelines

Caution Do not operate the SET-1240 in a manner not specified in this document. Product misuse can result in a hazard. You can compromise the safety protection built into the product if the product is damaged in any way. If the product is damaged, return it for repair.

Electromagnetic Compatibility Guidelines

This product was tested and complies with the regulatory requirements and limits for electromagnetic compatibility (EMC). These requirements and limits provide reasonable protection against harmful interference when the product is operated in the intended operational electromagnetic environment.

This product is intended for use in industrial locations. However, harmful interference may occur in some installations, when the product is connected to a peripheral device or test object, or if the product is used in residential or commercial areas. To minimize interference with radio and television reception and prevent unacceptable performance degradation, install and use this product in strict accordance with the instructions in the product documentation.

Furthermore, any changes or modifications to the product not expressly approved by SET GmbH could void your authority to operate it under your local regulatory rules.

Caution To ensure the specified EMC performance, operate this product only with shielded cables and accessories.

Caution To ensure the specified EMC performance, the length of any cable attached to connectors J1 and J2 must be no longer than 3 m (10 ft.)

Description

The SET-1240 xVDT Emulator Card provides 8 independent xVDT emulator channels, with galvanic isolated I/O. By this the applied excitation voltage and frequency can vary from channel to channel. Each channel can be configured individually as 6-wire or 4/5-wire xVDT emulation.

The SET-1240 xVDT Emulator Card works with a wide excitation frequency range of 400Hz to 10kHz.

The emulated A and B signal can be controlled separately. This allows the SET-1240 xVDT Emulation Card to emulate resolvers. In 5 and 6 wire configuration this also makes the simulation of over and undervoltage faults of the A + B current sum signal possible.

The SET-1240 xVDT Emulator Card has several self-test features. One of them allows to use an excitation signal injected by the instrumentation bus of the RTI, instead of the excitation signals from the front I/O. The RTI excitation can be used for both, self-test and normal operation.

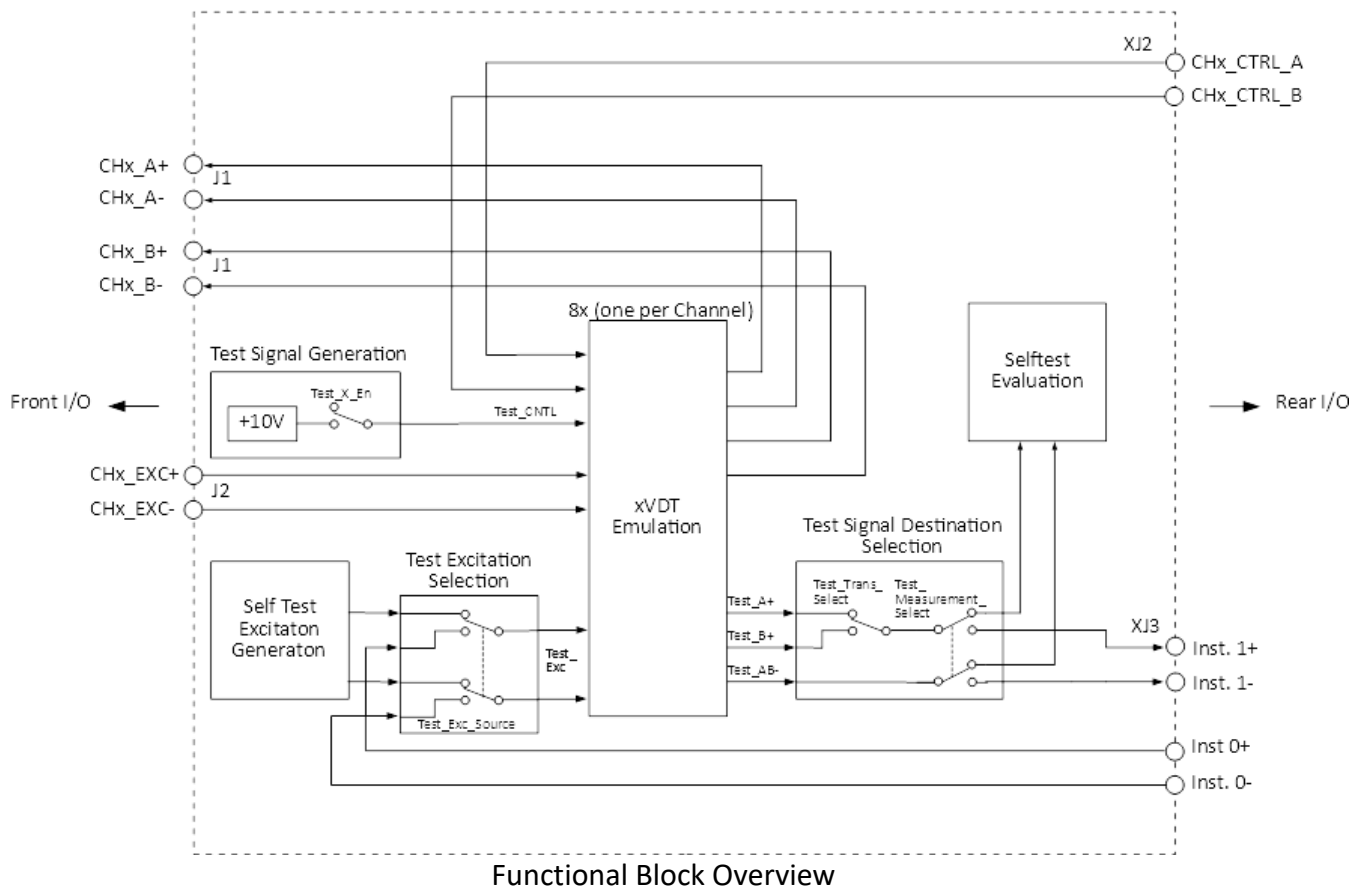

The self-test excitation generation circuit of the SET-1240 xVDT Emulator Card can generate a 400Hz, 1kHz and 10kHz excitation signal. Either this signal or the RTI excitation can be selected as test excitation.

As test CNTL signal 0V and +10V $\pm 2\%$ can be selected, which represents a gain of 0 and 1 $\pm 2\%$.

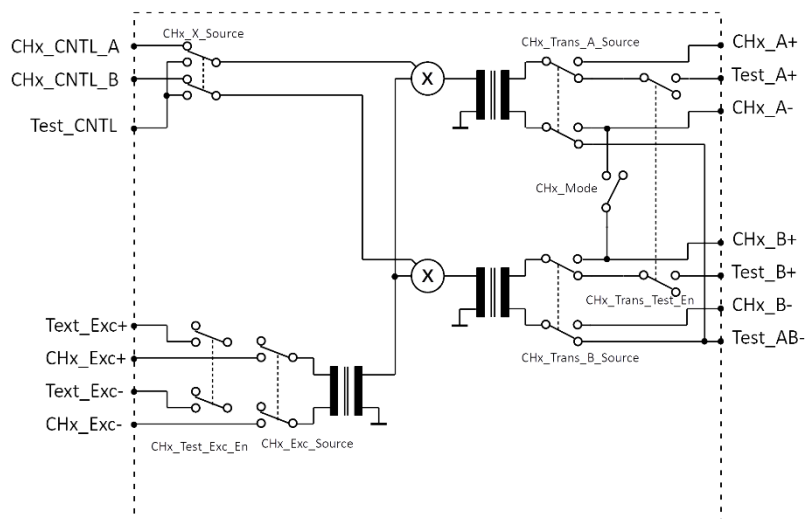

Instead of passing the A and B signals to the Front I/O, they can be switched to the internal test bus (Test_A+, Test_B+ and Test_AB-). The internal test bus can be forwarded either to the Selftest Evaluation circuit or to the instrumentation bus of the RTI. This includes the selection of either Test_A+ or Test_B+ as Test_AB+ signal.

The transformers used for the galvanic isolation are mounted on an internal sub-card and can be easily replaced. Please contact SET sales department, if you require a customized transformer module.

Circuitry

 **Note** Diagram shows the channel specific signals for only one channel.

xVDT Emulation Block Details

 **Note** Every channel has a separate xVDT Emulation Block.

J1, J2 Pinout (Front)

Signal	Description
CHx_A+/-	6-wire mode: Emulated A signal output 4/5-wire mode: CHx_A+ to be used as signal output (in 5-wire applications either CHx_A- or CHx_B+ can be used for common/GND line)
CHx_B+/-	6-wire mode: Emulated B signal 4/5-wire mode: CHx_B- to be used as signal output (in 5-wire applications either CHx_A- or CHx_B+ can be used for common/GND line)
CHx_EXC+/-	Excitation input
NC	No connection

J1, J2 Connector Pin Assignments

XJ2 Connector Pinout (Rear)

Row	e	d	c	b	a
1	CH1_CTRL_B	CH1_CTRL_A	NC	CH0_CTRL_B	CH0_CTRL_A

XJ2 Connector Pin Assignments

Signal	Description
CHx_CNTL_A	Controls the A signal generation
CHx_CNTL_B	Controls the B signal generation
GND	Ground connection
NC	No connection

XJ2 Connector Signal Descriptions

XJ3 Connector Pinout (Rear)

Pins	Signal	Slot1/Slot2
H	V1+	Instrument 0+
G	V1-	Instrument 0-
F	V2+	Instrument 1+
E	V2-	Instrument 1-
D	V3+	NC
C	V3-	NC
B	V4+	NC
A	V4-	NC

XJ2 Connector Pin Assignments

Signal	Description
Instrument 0+	Input: RTI Excitation +
Instrument 0-	Input: RTI Excitation -
Instrument 1+	Output: Test Signal AB+
Instrument 1-	Output: Test Signal AB-
NC	No connection

XJ3 Connector Signal Descriptions

LED Behavior

LED Name	LED Behavior	Definition of Behavior
PWR	Off	No power present on the board
	Solid green	Power good state
RDY	Off	Module card is unpowered or reset active
	Solid green	Card is recognized by chassis and ready to communicate
	Amber	Chassis is communicating

Error Handling

LED Name	LED Behavior	Actions
PWR	Off	<ul style="list-style-type: none">- Check power supply of chassis- Check external power supply if used
PWR	Blinking Red	<ul style="list-style-type: none">- Check plugin module on board- Check fuse on board

Hardware Specifications

Absolute Maximum Ratings			
Property	Condition	Value	Comment
Max. Excitation Voltage	Recommended Operation Range	400Hz ≤ f _{Exc} ≤ 1kHz: 3V _{RMS}	
		1kHz < f _{Exc} ≤ 10kHz: 7V _{RMS}	
	Operation without damage	10V _{RMS}	
Max. Common mode Excitation Voltage		45VDC	
Min. Common mode Excitation Voltage		-45VDC	
Max. RTI CNTL Voltage		+10V	
Min. RTI CNTL Voltage		-10V	
Excitation Frequency	Recommended Operation Range	400Hz – 10kHz	

Technical Data			
Property	Condition	Value	Comment
Update Time		10ms	SLSC Commit CMD duration
Expected Electrical Relay Lifetime	1A, 30V _{DC} resistive	10 ⁵ operations	
DC Resistance of Transformers		115Ω ±15%	

Physicals Characteristics			
Property	Condition	Value	Comment
Module Dimensions	Excluding ejector	144.32mm x 30.48mm x 302mm (H x W x D)	Standard SLSC card size
Front Panel Connector		2x female DB -44 high-density D-Sub with 4-40 UNC screw lock	For mating connectors and cables, see below
RTI Connector		2mm hard metric per IEC 61076-101	Any RTI marked

Hardware Specifications

Environmental			
Property	Condition	Value	Comment
Operating Humidity	Relative, non-condensing	10%-90%	
Storage Humidity	Relative, non-condensing	5%-95%	
Operating Temperature	Forced-air cooling from chassis	0°C-40°C	
Storage Temperature		-40°C-85°C	
Maximum Altitude		2000m
